

ISO/TS 16949 Certification for ELSOLD Solder Products

After many months of detailed and intensive preparation on all company levels ELSOLD Solder Products has now successfully concluded the certification audit according to ISO/TS 16949 and thus receives the confirmation that the quality management system established at the production site in Goslar meets the requirements of this demanding norm.

ELSOLD, a business unit of JL Goslar GmbH, thereby lays the foundation for a further expansion of its existing business relations with the suppliers of the German and European car manufacturers. ELSOLD expects above-average growth in the automotive electronics business since the electronic content of modern cars is growing at an accelerated rate.

Besides the customers from the automotive industry the certification according to ISO/TS 16949 is also relevant for other business sectors, since the certificate provides general prove that this manufacturer of high-quality solder products is running an effective quality management system meeting and exceeding the highest customer expectations.

ELSOLD develops, produces, and sells soft solder materials in the form of bars, ingots, clippings, solid and flux-cored wires, and solder pastes. Furthermore, the product range includes fluxes and other soldering aids (e.g. deoxidation tablets).
